

Pressure Compensating Shut-Off Gun

Models **31260**
31265

FEATURES

- Durable Nylon-Blend body and trigger provides longer life and less breakage.
- Quality construction stainless steel seat and valve assures thousands of continuous cycles.
- Unique valve design permits extended operation without operator fatigue.
- Special color coded trigger safety latch for easy identification.

SELECTION: Select a gun to match the system flow and pressure requirements, temperature and function being performed. These special, industrial guns are designed to minimize operator fatigue in high pressure applications.

INSTALLATION: If the system is a **single gun system** and the drive source will continue to run while the gun is intermittently shut-off, a pressure unloader should be installed. If **multiple guns** are in the system, either a pressure regulator or a special multiple-gun regulating unloader should be installed. In multiple gun systems, the **guns should be reasonably synchronized in flow** to avoid large amounts of by-pass from unused guns for prolonged periods. This may prematurely fatigue the pressure relief device or generate excessive heat in the by-pass mode.

SPECIFICATIONS

	U.S. Measure	Metric Measure
MODEL 31260		
Maximum Flow	8.0 GPM	(30 L/M)
Maximum Pressure.....	5100 PSI	(350 BAR)

MODEL 31265		
Maximum Flow	13 GPM	(50 L/M)
Maximum Pressure.....	3650 PSI	(250 BAR)

COMMON SPECIFICATIONS

Maximum Temperature.....	320°F	(160°C)
Inlet Port.....	3/8" NPTF	(3/8" NPTF)
Discharge Port	1/4" NPTF	(1/4" NPTF)
Weight.....	23.3 oz.	(0.66 kg)
Dimensions	7.50 x 7.25 x 1.25"	(190 x 184 x 31.8 mm)

Gun is stamped with a European safety pressure. Use only at above specifications to assure proper gun life and performance.

OPERATION: Flow through the gun occurs by squeezing the trigger on the gun. This activates the actuator rod, lifting the ball off the seat, allowing the pumped liquid to flow through the valve body chamber in the gun. A special double linkage provides increased mechanical advantage for ease of operation. Releasing the trigger shuts off the flow.

A special safety latch locks the gun closed to prevent unintentional operation when left unattended. This latch is blue on the weep version.

For safety and protection of the pump and system, a pressure relief device must be used with a high pressure gun. When the gun is shut off, pressure spikes could result in severe damage to the pump or other components in the system without this device. Carefully examine the functioning of the system to determine the best type of relief valve to be used.

“Customer confidence is our greatest asset”

TROUBLESHOOTING

Water leaking out the discharge of the gun	<ul style="list-style-type: none"> Object lodged between the seat and ball. Seat pitted or worn. O-Ring on seat worn or cut.
Water leaking out the trigger area	<ul style="list-style-type: none"> O-Ring on actuator rod worn or cut.
Water leaking out back of gun	<ul style="list-style-type: none"> O-Ring on rear plug worn or cut.

⚠ WARNING

Severe injury can occur with high pressure spray.
 Do not allow spray to contact any part of body.

WARRANTY

90 Day Warranty

Refer to complete CAT PUMPS Warranty for further information.
