

*Heavy-duty construction*  
*Compact, streamline style*  
*Stationary or portable*  
*Dual, stacked or multiple*  
*Electric, gas, diesel or hydraulic drive options*  
*Flow and pressure tested*  
*Fast turn-around time*  
*Full line of matching system accessories*

*The Pumps with Nine Lives*

# *Customized* **POWER UNITS**

**You define. We design.**

# Customize Your Power Unit You define the components. We design the system.

**Belt Drive**

Belt drive is the optimum drive choice providing maximum flexibility and added shock absorption for your system. Changing the pulley size quickly adjusts the output of your pump.

**Gas Drive**

Gas drive offers portability and access to remote locations. Coupled with a direct-drive pump for a compact, economical unit or belt-drive pumps for heavy-duty, higher performance.

**Hydraulic Powered**

Hydraulic drive provides a compact footprint and capitalizes on existing hydraulics to power the pump.

**Diesel Drive**

Diesel drive delivers fuel economy and performance longevity in higher horsepower systems. Like the gas drive, it provides access to remote systems.

**Oil cap protector prevents moisture and dust from entering crankcase oil.**

**Pump eyebolt for easy lifting of pump only. Additional balanced eyebolts available on base.**

**Bladder type, nitrogen precharged pulsation dampeners in steel or stainless mount directly onto discharge head for smooth minimum pulsation operation.**

**Pressure gauge in steel or stainless for checking pump head pressure and monitoring system performance.**

**Reinforced, 13-gauge expanded and flattened 1/2" metal belt guard assures proper ventilation and operator safety.**

**CAT PUMPS reciprocating, triplex plunger or piston pumps in brass or stainless offer flows from 0.5 to 320 gpm and pressures from 100 to 7000 psi for thousands for high-pressure liquid pumping requirements.**

**Typical electric drive can be 50 or 60 Hz with vari-drive, or alternate gas, hydraulic or diesel drive as required.**

**Convenient two screw adjustable motor base (epoxy coated or 304SS) simplifies belt tension and adjustment.**

**Oilers provide additional lubrication in dusty environments or when pumping low lubricity liquids.**

**Reinforced, flexible hose in steel or stainless installed before hard plumbing absorbs liquid pulsing at inlet and discharge of pump.**

**Convenient oil drain kit for easy periodic oil changes.**

**Safety shaft protector covers rotating pump shaft preventing personal injury.**

**S.S. Captive Acceleration Tube (C.A.T.) absorbs liquid energy to be released as needed, providing consistent inlet pressure and minimizing damaging surges, spikes and cavitation.**

**Recommended minimum 80 mesh inlet filtration to protect pump from abrasives and solids.**

**Formed sides for added strength and safety.**

**Primary pressure regulating valve and secondary safety relief valve in brass or stainless steel provide system pressure setting and protect pump from over pressurization.**

**Heavy-duty, 3/8" base plate (2-mil epoxy powder coated steel or 304SS) with 1/4" channel base supports for maximum weight load and minimal flexing.**

**Heavy-duty, bolt down shock mounts provide easy leveling and shock absorption.**

**Portable**

We deliver portability. Whether moving it around the plant or from one jobsite to another, systems are available with handle and wheels, carrying handle or truck mount base.

**Dual**

We deliver options. Dual pump systems permit doubling performance when needed or reducing energy consumption when only half performance is required.

**Stacked**

We can save you space. Our stacked units offer a smaller footprint than standard horizontal systems, yet easy accessibility for periodic maintenance.

**Multiple**

We provide flexibility. Our multiple pump systems permit expanding the system to meet future needs and bringing pumps up to speed as the demand increases.

Typical full system drawing is available upon request for an additional charge.

## Why buy a CAT PUMP Power Unit?

There are many reasons for buying a CAT PUMP Power Unit and there are many customized options. They eliminate the design, multiple source buying, fabrication and testing from your busy schedule. They are a high quality unit designed specifically for your client's application. They are backed by CAT PUMPS experience and reputation.

## What is a Power Unit?

Power units are customized pump assemblies. Each unit includes pump(s), system accessories and a rugged base. They are available as a single pump unit, multiple pump units, stacked unit or mobile with handle and wheels. Drive options include electric motor, hydraulic, gas or diesel engine.

The most common power unit is a horizontal base with sheave(s) and belt(s), electric motor and belt guard. The standard horizontal base is formed, heavy-gauge steel with a 2-mil epoxy finish. Belt guards are reinforced, 13-gauge flattened, expanded steel with 1/2" mesh for ventilation and safety. Both the base and guard can be customized to your paint specification or made of 304SS. Bolt-down leveling and vibration shock mounts and two-screw adjustable motor mounts for easy belt tension adjustment are both standard items. You tell us what you need customized and we will build to those specifications. Most units are typically delivered in 2-8 weeks depending on the level of customization.

## After Sale Support

Our technical team is available whenever you need them to support you with installation, operation or maintenance information. Each Power Unit comes with a custom owner's catalog that includes the data sheets for each component; pump service manual with maintenance diagnosis chart and plumbing view identifying how each component is plumbed into your system. You will find additional technical support at our web site under [FAQ](#) and [Service](#).

## You Define...We Design

We look forward to working with you on your next Power Unit. To secure a quotation, please enter all the requirements for your system on the Power Unit Quotation Checklist and submit to CAT PUMPS. If you prefer, you may also complete this form on-line.
